

# hp C7115X/A ultraprecise print cartridges

## superb printing and copying, at a great price

Utilising ultraprecise technology the HP C7115X/A print cartridges have been designed for the HP LaserJet 1200 series printers to provide fast, high-resolution, low-cost business printing. The HP C7115A will produce around 2,500 pages of crisp, sharp and professional results. The higher capacity option, the HP C7115X\*, will produce around 3,500 pages.

## ultraprecise

Both cartridges deliver the professional print quality you expect from ultraprecise technology. The OPC (electrographic) drum enables the printer to produce smaller, more precisely placed dots, for true 1200 dpi resolution images. A helical roller drive creates a seamless interface between cartridge, printer and paper to ensure band-free output for the life of the toner supply. The dual polymer toner fuses to the page with greater accuracy and at lower temperatures – the first page comes off the printer in less than 18 seconds. Ultra fine toner particles produce sharper text, smoother greyscales and blacker blacks, and finer detail for photographic images and graphics downloaded from the internet. Improved magnetic seals lock the toner inside the cartridge to prevent leakage.

## brilliant desktop performance

This superb combination of a low-cost, high-performance cartridge with a fast desktop printer, copier and scanner provides convenient, no-wait printing in a home or office setting, plus the ability to copy and e-mail documents and colour scans direct from the desktop.

### features

- hp ultraprecise extra-fine dual polymer toner
- sensitive OPC drum produces smaller, more precisely placed dots
- toner chemistry forms a more accurate bond with the paper at lower temperatures
- helical roller drive provides a fluid interface to reduce gear chatter
- magnetic seals lock the toner inside the cartridge to prevent leakage

### benefits

- crisp, sharp quality for professional documents
- genuine, high resolution printing at 1200 dpi
- consistent print quality for the life of the cartridge
- instant printing – print the first page in under 18 seconds
- no more banding – even when toner levels are becoming low
- clean, troublefree printing, from the first page to the last

- designed as an integral part of the hp LaserJet 1200 series printers
- branded hp pull-tab confirms this is the right cartridge for your printer

- fast, consistent and reliable printing from the first page to the last
- guaranteed and supported by hp

- convenient, low-cost personal printing

- low-cost cartridge, competitive cost-per-page and excellent cost-per-copy
- yield designed to reflect home and small office needs

- easy hp supplies recycling through hp planet partners return programme\*\*

- convenient disposal, kinder to the environment

\*Available from July 2001

\*\*For more information about recycling, please refer to the FAQ section of the HP supplies web site at: [www.hp-go-supplies.com](http://www.hp-go-supplies.com) or contact your local HP representative

# hp C7115X/A ultraprecise print cartridges

## frequently asked questions

### what's different about this cartridge?

This cartridge has been specially designed to optimise the performance of the new HP LaserJet 1200 series of desktop printers. A combination of practical, 2,500-page yield and low unit price make it ideal for everyday personal printing at home or in a small office. Like all HP print cartridges, it benefits from ultraprecise technology to ensure fast, professional, troublefree printing. For users who want a bigger yield cartridge, HP has produced the higher capacity HP C7115X\*, to provide 3,500 pages from a single cartridge.

### what is ultraprecise?

Ultraprecise describes an innovative print cartridge design and toner formulation. The cartridge features tonergauge technology for more precise toner level monitoring and HP magnetic seals to ensure a clean printing environment. Both reduce printer downtime and provide uninterrupted service to user applications. Extra-fine toner produces smoother greyscales, finer detail and true-to-life contrast

between subtle photographic shades. The cartridge can hold more of this new toner, which means more output per cartridge and fewer cartridges to buy, store and dispose of. HP ultraprecise LaserJet print cartridges also feature a fraud-proof pull-tab, embossed with the HP logo, to prove you are using a genuine HP print cartridge.

### what's instant-on fuser technology?

Dual polymer toner is specially formulated to fuse with standard media at lower temperatures. This means that you don't have to wait for the printer to warm up before printing can start. The first page will print just 18 seconds after the print command is executed.

### what difference does the OPC drum make?

It is more sensitive than the drums used in previous cartridges. What happens is that the printed image is electrostatically burned onto the OPC drum by a laser in the printer. Toner is transferred to the charged drum and then onto the page. Because the OPC drum is more sensitive to the process, the printer will produce smaller, more precisely placed dots for true, 1200 dpi output.

## product specifications

p/n	description	UPC code	dimensions (l x w x d)	wt.
C7115A	hp LaserJet ultraprecise standard capacity print cartridge	7 25184 51845 4	344 x 122 x 196 mm	1.03 kg
C7115X	hp LaserJet ultraprecise maximum capacity print cartridge	7 25184 54846 1	344 x 122 x 196 mm	2 kg
